

A Containment

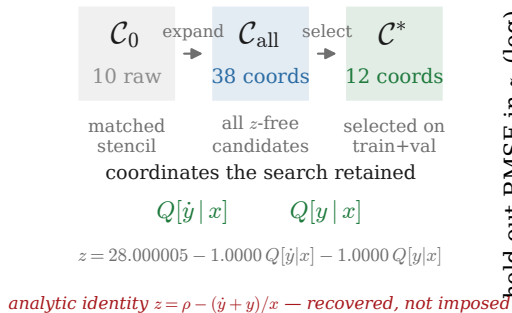

○ PySINDy × restricted SIR true coefficient

identical support, both methods

$\max |\Delta c| \text{ vs truth} = 3e - 14$

$\max |\Delta c| \text{ between methods} = 4e - 14$

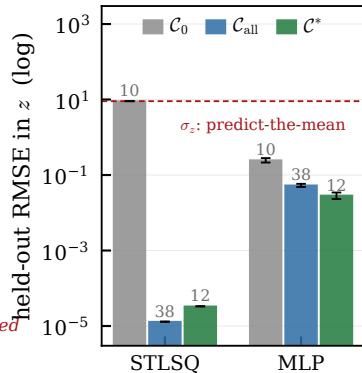

B Representation

$$z = 28.000005 - 1.0000 Q[\dot{y}|x] - 1.0000 Q[y|x]$$

analytic identity $z = \rho - (\dot{y} + y)/x$ — recovered, not imposed

C Protected test utility

numerals = coordinate count; noiseless primary benchmark under 1% noise the MLP advantage does not persist (SI)
