

a Task Contracts Select Trajectory Representations

32 realizations · compression invariant and protected autonomous prediction

Compression

Shared invariant + one scalar per realization

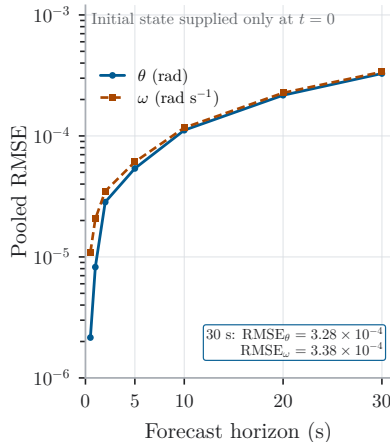

$$\omega^2 = -3.645(1 - \cos \theta) + 2E_i$$

Prediction

Frozen law + eight protected holdouts

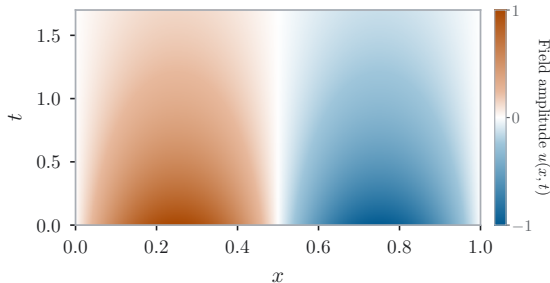

$$\dot{\theta} = \omega, \quad \dot{\omega} = -1.82245149 \sin \theta$$

b Structural Uncertainty Supports Multiple Representations

Temporal, spatial and coupled relations on one mode

Observed field $u(x, t)$

Temporal representation

$$u_t + \alpha u = 0$$

$$\alpha = 1.18435$$

Spatial representation

$$u_{xx} + (m\pi)^2 u = 0$$

$$m = 2$$

Coupled diffusion representation

$$u_t - \kappa u_{xx} = 0$$

$$\kappa = 0.03$$

All displayed relations: $\|R\|_\infty < 10^{-4}$
