

a Fixed-representation support recovery

Full-state recovery · exact analytic RHS targets

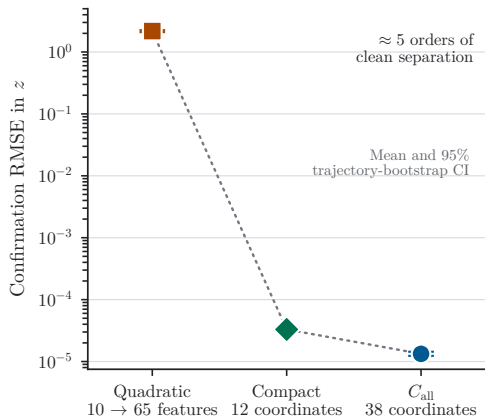

$$\begin{aligned}\dot{x} &= 10(y - x) \\ \dot{y} &= 27.998x - 0.9995y - 0.9999xz \\ \dot{z} &= xy - 2.667z\end{aligned}$$

Exact support recovered; $\|\Delta \mathbf{c}\|_\infty = 2.0 \times 10^{-3}$

c Clean-data relational advantage

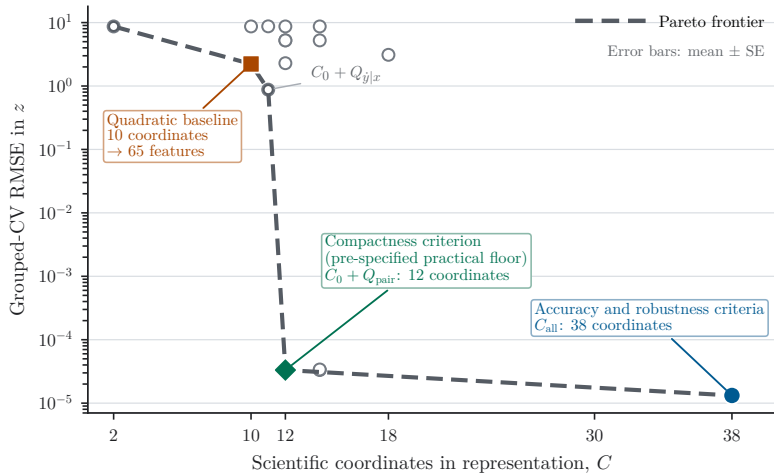

$N = 24$ independent trajectories · common support

Development data select representations; the protected confirmation cohort is used only for evaluation.

b Accuracy and compactness select different representations

17 admissible representations · 48 development trajectories · 6 grouped folds

d Observation noise changes relative ranking

Controlled stress test · $N = 24$ trajectories $\times$ 3 replicates · common support
